

Tools Specific Filter

It allows you to filter sequences from .fasta format files that have a specific set of characters in their headers.

- ① Select the input folder. It should only contain the .fasta files you want to filter.
- ② Enter the series of characters by which you want to filter with the preceding and following separator.
- ③ Select the output folder without entering the file name. It will be automatically named as Specific_Filter_InputFileName.fasta.
- ④ Click Calculate.

For each input file, an output file will be generated containing the .fasta sequences that include the specified series of characters.

More information about this function can be found in the User Manual, section:
